Keywords: Computer program system R, Robustness, Geochemical analysis.

Abstract

John Fox (2004) has provided a graphical user interface to R called “R Commander”. With this interface, the powerful statistically oriented program system R can be used by many more users who work more “essentially mouse oriented”.

We report on an extension of the R Commander for a project on spatial analysis of (in particular) geochemical data. The emphasis of course is put on robust methods. Examples with geochemical data are given (see e.g. Reimann et al., 1998).
